

WTR700

Version 01/2024

WATER TREATMENT for human consumption and leisure

The WTR700 product is a disinfectant with antimicrobial action for disinfecting water for human consumption or leisure. Recommended for treating water for human consumption when its potability is unknown or if there is suspicion of contamination. Fast and effective treatment of swimming pool water, eliminating bacteria, fungi and algae; leaving the water in ideal conditions for use, in addition to preventing the formation of biofilm and with a longer active period in the water.

*In the dilution of the indicated use.

WTR700

Version 01/2024

How to use:

When handling the product, use appropriate PPE such as gloves, mask, safety glasses and apron or lab coat. Do not shake the packaging.

Add 10 (ten) ml of the product for every 1,000 (one thousand) liters of water. After adding WTR700, wait 30 minutes before consuming the water or using it for other purposes. It is recommended that the pool be physically cleaned before applying WTR 700. This cleaning is done by brushing the walls, cleaning the edges and even the area around the pool. Afterwards, the dirt deposited on the bottom is vacuumed and, depending on the situation, this water should be drained.

Caution:

Do not mix with other products. Mixing with acids or acid-based products produces toxic gases. Do not eat, drink or smoke during application.

Inactivation and disposal method:

The diluted product can be disposed of directly into the sewage system without the need for treatment.

Conservation and storage:

Keep the product in its original vertical and closed position, away from sources of heat, humidity and direct sunlight.
